Blooms on Ice

REAL FLOWERS. LOVINGLY HANDMADE.

Keep your celebration beautifully chilled

Save it for the celebration

Not using it right away? Place the floral ice piece itself in the freezer until you are ready to display it around your bottle.

Nestle it in fresh ice

Keep fresh ice around as much of the floral ice piece as your bucket allows. Real flowers may tint the ice and water as your Bloom melts. Drain the meltwater and replace discolored ice with fresh ice as needed.

Enjoy the moment

A Bloom typically lasts approximately 3-5 hours, depending on temperature and surrounding conditions. As it melts, you are left with a beautiful puddle of flowers. Take photos, relax and enjoy!
